

TIG Energiesysteme GmbH strengthens the industrial network supply competence of ROBUR

With retroactive effect from 01.01.2022, Soest-based TIG Energiesysteme GmbH (TIG) will become part of the Munich-based ROBUR Industry Service Group, thus strengthening the Group's portfolio of services in the area surrounding the existing ROBUR partners SNG (Eching) and GESA (Hilter) and expanding it to include industrial grid services.

"TIG Energiesysteme GmbH offers more than 35 years of experience in electrical engineering" explains Rolf Kaudasch - Managing Director of TIG - "because, before I founded the company in 2003, I had already been employed for many years in a leading position in the medium and low-voltage switchgear sector at ABB and was therefore well prepared for the leap into independence."

"Our service profile covers the entire range of power supply in the medium and low-voltage sector, from planning to project planning and installation to commissioning as a partial or turnkey service - this is our focus" Rolf Kaudasch explains further.

The requirements for industrial electrical systems and machines are becoming increasingly complex. TIG has the know-how, the experience, and the creativity to completely adapt and install electrical systems to the individual needs of the customer.

For many years, TIG has been providing above-average services in the development and realization of electrical systems. With dedication and professionalism, the specialists develop convincing electrotechnical solutions for a wide variety of industrial sectors. As a competent and qualified partner and technical service provider, the focus is on electrical power engineering and electrical building equipment.

"ROBUR is an industrial services specialist and as such we strive to continuously expand our group of specialists and add to our portfolio of offerings. With Rolf the exchange was friendly, cordial and in partnership from the beginning and therefore it was quickly clear that the team of TIG will be an enrichment of the whole group" explains Florian Kopp, co-founder and managing partner of ROBUR this step to expand the group again.

"With our new colleagues from TIG, we are expanding our portfolio in industrial power supply - both regionally with their presence in the west of the republic, as well as professionally with their many years of experience in measuring and analysis procedures, the expansion of existing plants and the turnkey installation of holistic solutions in low and medium voltage. This means that we will live up even more to our claim as a leading full-service provider for ecological and industrial change - welcome to the team!" concludes Jan-Jörg Müller-Seiler, CEO and Managing Partner of ROBUR.
